Innovation collective workshops					
Take on a problem posed by a healthcare professional (such					
as an occupational therapist) and, in just a few hours,					
propose a viable, assessable technological solution, mainly					
using FabLab technologies.					
Presentation of a concrete problem by a healthcare					
professional or user of professor. Students define the need					
and work on specifications. Co-creation of preliminary					
technological proposals, followed by an advanced					
technological solution. Choice of technological components					
and associated manufacturing processes, followed by					
development of the solution and its evaluation in real-life					
situations.
